

BloodTrack® Emerge

Immediate access to life-saving
blood products – when every
second counts.

Using the BloodTrack Emerge system can help you:

- Safely store emergency (O-neg, O-pos and AB-plasma) blood products in your clinical area
- Begin the resuscitation process for exsanguinating patients faster
- Maintain compliance for the management of blood products

SOFTWARE SOLUTIONS

Every second counts when your patient is in critical condition and requires an emergency blood transfusion. The sooner you can access and administer the life-saving blood products your patient needs, the better the chance of a positive medical outcome.

The BloodTrack Emerge system enables your Blood Bank to safely and properly store emergency blood products in your clinical area, improving access and reducing transport time, while maintaining compliance with your hospital's standard operating procedures, accreditations and regulations for the management of blood products.

The BloodTrack Emerge system safely delivers controlled access to life-saving emergency blood products, providing you with much needed peace-of-mind in stressful situations. Works with your existing refrigerators.

Immediate access to emergency blood products at the point-of-need

Storing blood products in your clinical area reduces transport time, which can be critical in an emergency situation when every second counts. The BloodTrack® Emerge system monitors and records out-of-storage times, helping ensure product quality and movements of blood products – whether in or out of the BloodTrack controlled refrigerator. The system also generates an electronic audit trail of each unit required for traceability. Plus, knowing that additional life-saving emergency blood products are available, should you need them, provides much-needed peace-of-mind in stressful situations.

The BloodTrack Emerge system helps to:

- Advance patient safety and care efficiency with improved access to blood products
- Enable the blood bank to operate remotely, providing speed, efficiency and enhanced safety
- Eliminate the need for coolers or unsecured refrigerators

About Haemonetics

Haemonetics is *THE* Blood Management Company.

Our comprehensive portfolio of integrated devices, information management, and consulting services offers blood management solutions for each facet of the blood supply chain, helping improve clinical outcomes and reduce costs for blood and plasma collectors, hospitals, and patients around the world. We believe that through proper blood management, our products and services help prevent a transfusion to the patient who doesn't need one and provide the *right* blood product, at the *right* time, in the *right* dose to the patient who does.
